

PRODUCT CARE GUIDE

All Products

- Avoid placing the furniture directly in sunlight as this cause materials to fade or crack. Direct sunlight includes sunlight coming through windows.
- Do not place the furniture too close to a heater appliance as this may distort the material or surface finish.
- Do not place the furniture directly against a wall.
- Colored fabrics may rub off.
- If possible, rotate cushions regularly to even wear and fading.
- Make sure to keep a general air humidity where your furniture is placed through regular ventilation.
- Innovation Living's furniture is not intended for outdoor use. Wet or moist environment will cause corrosion.

Fabrics

- Keep the fabric clean for dust and dirt by vacuuming regularly.
- If the furniture gets spots from beverages, food, etc. dry the spots immediately with a clean cloth. If it does not remove the spot completely, apply mild detergent foam with a soft brush and sponge in circular motions. The clean spot can be dried with a hair dryer using low heat only. Vacuum the spot when it is dry. It is recommended to pre-test on a small unexposed area before cleaning the spot.
- All fabrics in our collection are machine-washable on Eco warm. Innovation Living recommend the following care instructions: - Unzip the detachable cover and turn inside out. - Machine-wash at max. Eco warm. Max half full machine on standard program. No chemical cleaning. - Centrifuge on reduced speed. - Do not tumble dry. - Hand up to dry until the fabric is damp-dry/slightly dampened. - Reattach and zip up the fabric. - Let the fabric dry completely while attached.
- For more difficult stains, such as blood, oil, ink, etc., please contact a professional dry cleaner.

Wood Surfaces

- Several Innovation Living furniture have wood legs and/or arm rests. As wood is a natural living material that continues to develop over time, its color and surface change according to the use of the furniture. Wood must be protected from direct sunlight to reduce fading.
- Metallic surfaces
- Dust regularly with a soft cloth. Never use scouring agents on metallic surfaces.
- Repair damaged surfaces immediately to prevent corrosion. Chrome and stainless steel can be treated and cleaned with a suitable cleaning agent; please consult an expert for advice.

Innovation Living Mattresses

- Innovation Living's mattresses are continuously developed to achieve an improved comfort by increasingly developing the mattresses' quality and environmental appeal. Innovation Living's mattress range includes several options with various comforts, each a unique combination of layers and materials to fulfill most needs and user-situations.

Fiberfill

- Fiberfill in Innovation Living mattresses are developed to provide better comfort, longer durability, and a more environmentally friendly mattress. Fiberfill is a strong material ensuring similar mattress form and an effective transportation of humidity. Simultaneously, fiberfill is more resistant towards e.g., humidity, blemish, and potential ignition.
- The composition of the mattress and its flexible materials improve the mattresses' lifetime and make them ideal for use in sofa beds. Moreover, fiberfill is a low CO₂-emission material that, at the same time, is recyclable and OEKO-TEX certified. This means less resource consumption and ensures a lighter mattress.

Innovation Living Cushions

- Most of our cushion fillings consist of a mix of feather and polyester fillings. These materials are combined to ensure the best back support and comfort. An increasing proportion of our cushions consist of OEKO-TEX recycled fiberfill. Make sure to regularly turn and lightly beat the cushions to maintain shape, filling, and comfort.
- All cushion covers can be removed and machine-washed at Eco warm. Look under "Fabrics" to see our recommended care instructions.
- For more difficult stains as blood, oil, ink, etc., please contact a professional dry cleaner.
- To facilitate transportation, we have vacuum-packed our cushions. This makes the filling look less plump. To get the cushions in shape, please remove the plastic and fluff up the cushion until the filling is plump and stretchy. If needed, repeat this a couple of times over the next few days. Regulate the corners of the cushion to make the filling spread evenly. Finally, you put the cushion into its cover. Remember to fluff up the cushion regularly to maintain its shape. Keep the room ventilated to avoid humidity and thereby extend the durability of the cushions.
